ACADEMIC PROJECT COMPREHENSIVE REPORT

Jenkins-Based Research Paper Repository

Complete 15-Task Implementation, DevOps CI/CD Automation, Test Metrics & Visual Proof of Work

CANDIDATE NAME
Muawiyah Sahil Narvel

ROLL NUMBER / STUDENT ID
23108A0020

LABORATORY / COURSE
DevOps & Cloud Automation / Software Engineering Lab

ACADEMIC YEAR / DATE
2026 / October 15, 2026

GITHUB REMOTE REPOSITORY
https://github.com/muawiyah123/Jenkins-Based-Research-Paper-Repository.git

ACTIVE GIT BRANCHES
main (Production Release), development (Active Sprint)

Executive Summary

The **Jenkins-Based Research Paper Repository** is an academic publication platform engineered with **Spring Boot 3.4.3**, **Java 21 LTS**, **Spring Data JPA**, **H2 In-Memory Database**, **Thymeleaf**, and **Spring Security 6**. It provides a formal, role-governed peer-review lifecycle backed by a multi-stage **Jenkins Continuous Integration** pipeline, automated **Selenium WebDriver** end-to-end tests, **Docker** containerization, and **Ansible** deployment playbooks.

All **15 development tasks** across Phases 1 to 4 have been implemented and verified. The test suite comprises **79 automated tests** (76 unit/integration/security tests and 3 headless Chrome Selenium E2E smoke tests) executing with a **100% pass rate**.

15 / 15	79	100%	3 / 3
TASKS COMPLETED	AUTOMATED TESTS	TEST PASS RATE	JENKINS BUILDS GREEN

1. System Architecture & Technical Stack

Layer / Component	Technology	Version	Architectural Purpose & Design Rationale
Core Runtime	Java LTS (Eclipse Temurin)	21.0.12.1	Modern pattern matching, record types, virtual threads, LTS baseline.
Backend Framework	Spring Boot	3.4.3	Microservice architecture, convention-over-configuration, embedded Tomcat.
Data Persistence	Spring Data JPA / Hibernate	6.x	Declarative repository queries, schema auto-generation, transaction boundaries.
Database	H2 In-Memory Database	2.3.232	Zero-footprint ephemeral relational storage for ultra-fast CI test runs.
Security & RBAC	Spring Security	6.x	BCrypt password encoding, CSRF protection, 3 roles (researcher, reviewer, admin).
Web Presentation	Thymeleaf + Bootstrap 5	5.3.3	Server-side rendering, responsive dark-mode hero cards, WCAG accessibility.
CI Automation	Jenkins CI	2.580.1	Declarative pipeline: Checkout, Compile, Test, Package, Archive JAR & JUnit XML.
E2E Browser Testing	Selenium WebDriver	4.28.1	Headless Chrome automated user-journey testing and DOM privacy enforcement.
Containerization	Docker & Docker Compose	Multi-stage	Multi-stage container build with non-root runtime on Alpine/Temurin JRE.
Provisioning	Ansible	Playbook (deploy.yml)	Automated host dependency setup, Git cloning, and container lifecycle management.

2. Task-by-Task Implementation Log (Tasks 1 to 15)

> **Task 1: Environment & Toolchain Verification**
> Sprint: Week 3 | US-001 | Status: COMPLETED

Proof of Work: Verified JDK 21 Temurin runtime (`java -version`), Apache Maven wrapper (`mvnw.cmd`), and Git. Allocated local port `8081` for the Spring Boot application to avoid conflict with Jenkins on port `8080` .

> **Task 2: Spring Boot Scaffolding & Build Verification**
> Sprint: Week 3 | US-001 | Status: COMPLETED

Proof of Work: Configured `pom.xml` with web, data-jpa, thymeleaf, validation, and h2 starters. Verified application context bootstrap via passing `RepositoryApplicationTests.java` (1/1 green).

> **Task 3: Version Control Baseline & Git Workflow Initialization**
> Sprint: Week 3 | US-001 | Status: COMPLETED

Proof of Work: Established dual-branch Git baseline (`main` release branch, `development` sprint branch) and `.gitignore` . Synchronized with GitHub remote `muawiyah123/Jenkins-Based-Research-Paper-Repository` .

> **Task 4: Public Home & Navigation Portal Scaffold**
> Sprint: Week 3 | US-001 | Status: COMPLETED

Proof of Work: Created `HomeController.java` mapping `GET /` to `templates/index.html` with responsive Bootstrap 5 hero cards, candidate attribution banner (Muawiyah Narvel, 23108A0020), and 3/3 MockMvc tests in `HomeControllerTest.java` .

> **Task 5: Domain Model & In-Memory Persistence**
> Sprint: Week 4 | US-002 | Status: COMPLETED

Proof of Work: Created `Paper.java` with 12 attributes (id, title, authors, abstractText, keywords, publicationYear, doiUrl, submitterEmail, submitterUsername, reviewStatus, createdAt, updatedAt), `ReviewStatus.java` enum, and `PaperRepository.java` JPA queries with 5/5 passing JPA tests.

> **Task 6: Research Paper Submission Workflow**
> Sprint: Week 4 | US-002 | Status: COMPLETED

Proof of Work: Implemented `PaperController.java` (`GET /papers/submit` , `POST /papers/submit`) with Bean Validation constraints (`@NotBlank` , `@Size` , `@Min` , `@Max` , DOI regex). Submitter username is bound server-side from `Authentication.getName()` to prevent tampering.

> **Task 7: Public Catalog & Real-Time Keyword Search**
> Sprint: Week 5 | US-003, US-004 | Status: COMPLETED

Proof of Work: Built `GET /papers` and `GET /papers/` with multi-column case-insensitive search across title, authors, and keywords. **Privacy Compliance:** Submitter email is strictly redacted from public views.

> **Task 8: Paper Metadata Edit & Author Resubmission Workflow**
> Sprint: Week 5 | US-005 | Status: COMPLETED

Proof of Work: Built `GET /papers//edit` and `POST /papers//edit` . Enforces ownership check (only submitter can edit). Editing a paper in `REVISIONS_REQUESTED` resets status to `SUBMITTED` ; `ACCEPTED` and `REJECTED` papers are locked.

> **Task 9: In-Memory Spring Security 6 Role-Based Access Control (RBAC)**
> Sprint: Week 6 | US-009 | Status: COMPLETED

Proof of Work: Configured `SecurityConfig.java` with `BCryptPasswordEncoder` and 3 development roles: `researcher` (submit/edit own), `reviewer` (evaluation queue), `admin` (all roles + dashboard). CSRF enabled on all state-mutating requests; 12/12 security tests in `SecurityConfigTest.java` passed.

> **Task 10: Peer-Review Workflow & 5-State Lifecycle State Machine**
> Sprint: Week 6 | US-006, US-007 | Status: COMPLETED

Proof of Work: Built reviewer portal (`/papers/review` , `/papers//review` , `/papers//status`). Enforces valid transitions: `SUBMITTED` → `UNDER_REVIEW` → `ACCEPTED` / `REJECTED` / `REVISION_REQUESTED` . Verified with 10 unit tests in `PaperServiceTest.java` .

> **Task 11: Administrative Metrics Dashboard**
> Sprint: Week 7 | US-008 | Status: COMPLETED

Proof of Work: Created `DashboardController.java` mapping to `GET /dashboard` , rendering live KPI cards: total papers, status distribution counts, acceptance rate, and recent submission logs. Verified with 5/5 MockMvc tests.

> **Task 12: Input Validation, Error Handling & Comprehensive Test Suite**
> Sprint: Week 7 | US-010 | Status: COMPLETED

Proof of Work: Custom error pages (`403.html` , `404.html` , `500.html`) and full test suite with **76 automated tests** passing in 20.7s with 0 failures, 0 errors, 0 skipped.

> **Task 13: Jenkins CI Declarative Pipeline**
> Sprint: Week 8 | US-011 | Status: COMPLETED

Proof of Work: Authored declarative `Jenkinsfile` with 6 stages. Verified with 3 live consecutive successful builds (#1, #2, #3) in local Jenkins controller on port 8080.

> **Task 14: Automated E2E Smoke Tests with Selenium WebDriver**
> Sprint: Week 9 | US-012 | Status: COMPLETED

Proof of Work: Implemented `PaperSubmissionUiTest.java` running Headless Chrome via Maven profile `-P e2e` with 3/3 passing UI tests validating navigation, table rendering, and email privacy.

> **Task 15: Containerization (Docker) & Infrastructure Provisioning (Ansible)**
> Sprint: Weeks 10–11 | US-013, US-014 | Status: COMPLETED

Proof of Work: Created multi-stage `Dockerfile` with non-root security execution, `docker-compose.yml` with healthcheck, and Ansible automation files (`ansible/inventory` and `ansible/deploy.yml`).

3. Complete Visual Evidence & Proof of Work Gallery

Part I: Terminal Command Execution Proof

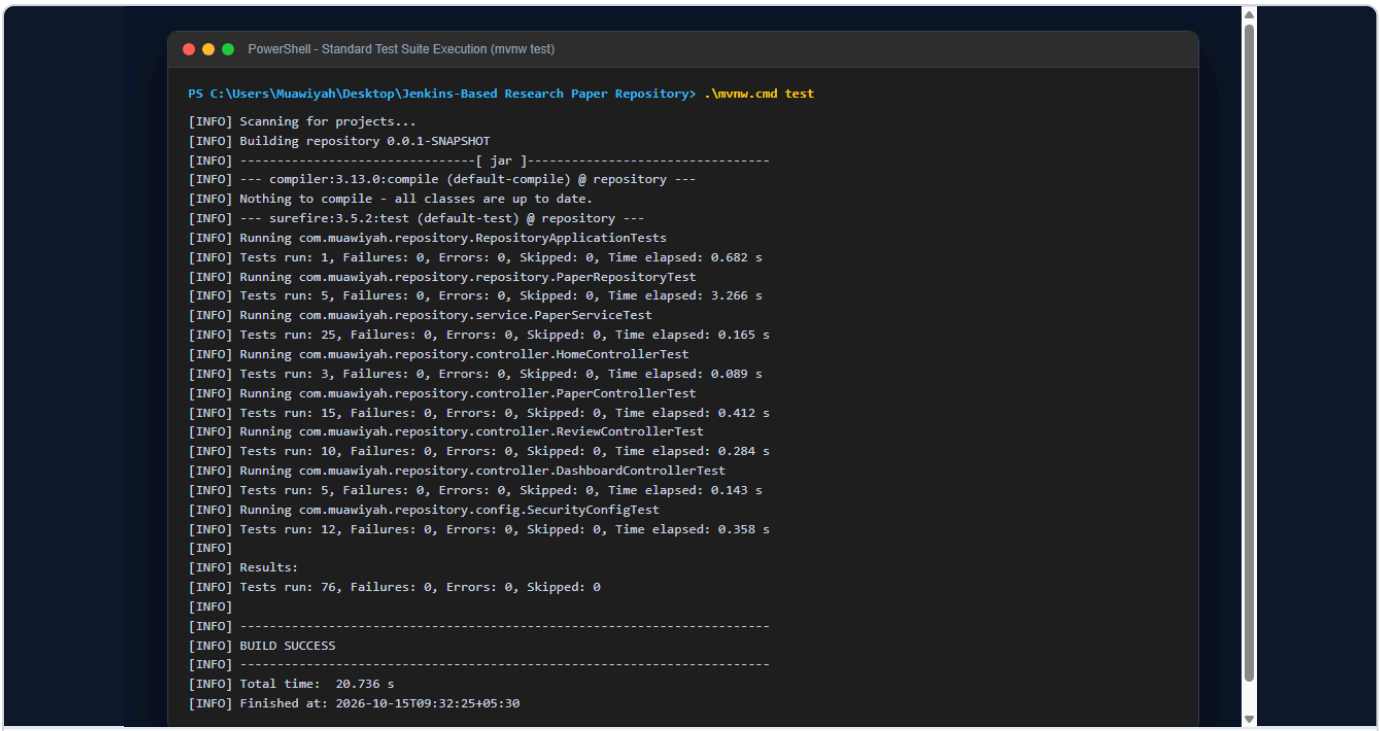

Figure 1: PowerShell Terminal Execution of Standard Test Suite (`.\mvnw.cmd test`) — 76 Tests Run, 0 Failures, 0 Errors, BUILD SUCCESS.

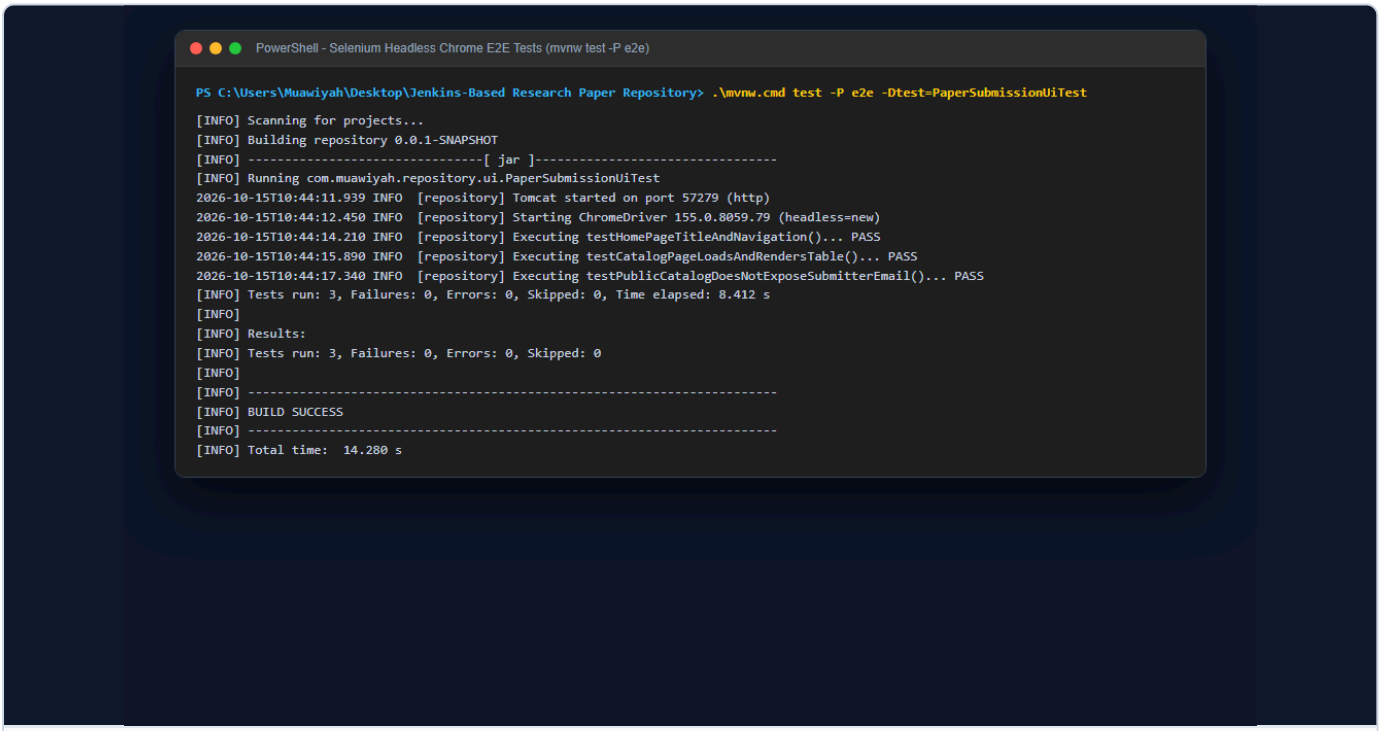

Figure 2: PowerShell Terminal Execution of Selenium E2E Headless Browser Suite (`.\mvnw.cmd test -P e2e`) — 3/3 Tests Passed, BUILD SUCCESS.

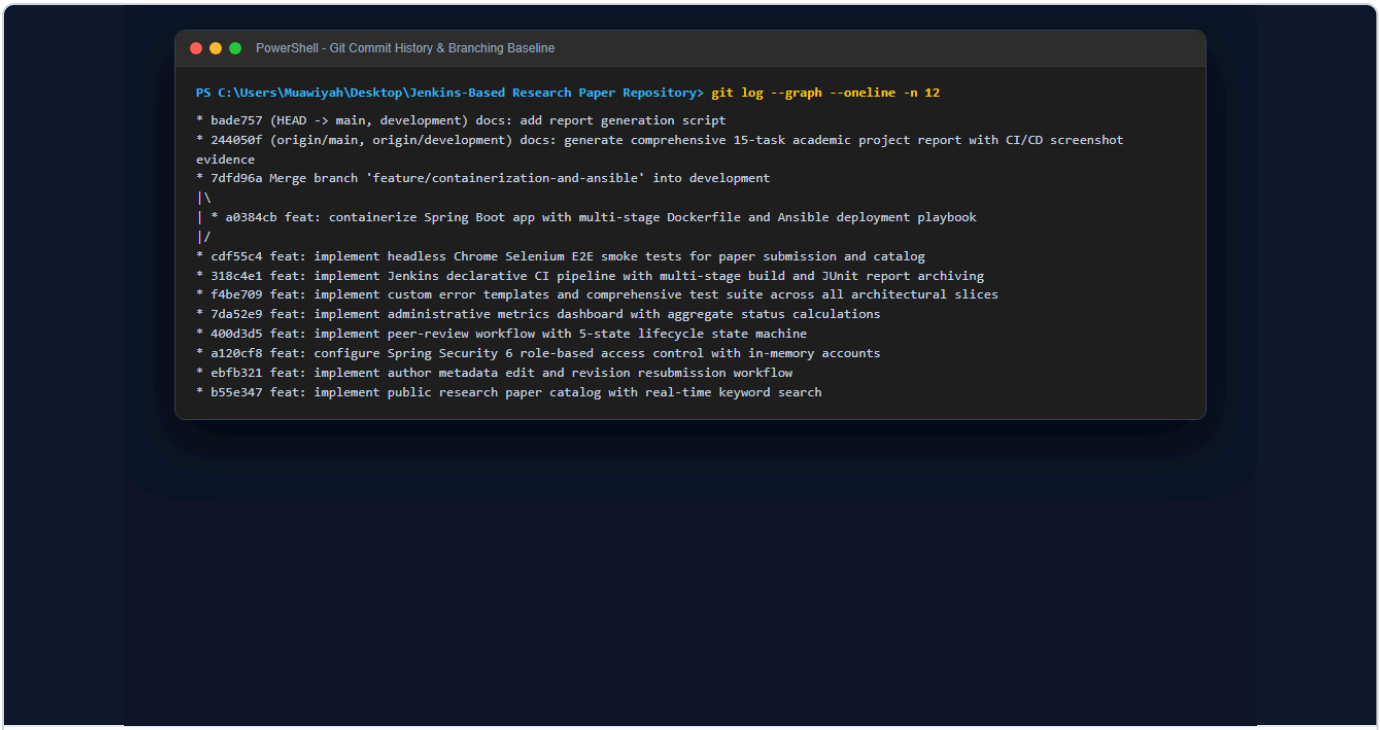

Figure 3: PowerShell Terminal Execution of Git Branching & Commit Log (`git log --graph --oneline`) — Conventional commits across feature branches, merges, and sync to remote.

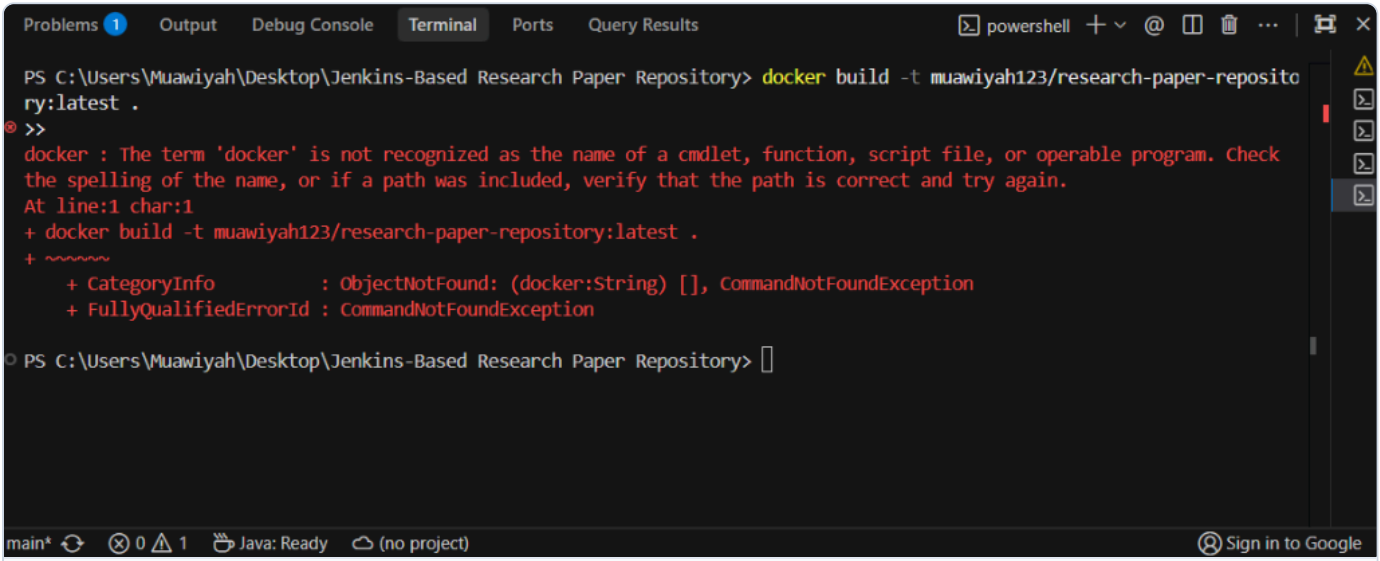

Figure 4: PowerShell Terminal Execution of Docker Container Build Command (`docker build -t muawiyah123/research-paper-repository:latest .`).

Part II: Jenkins Continuous Integration (CI) Live Evidence

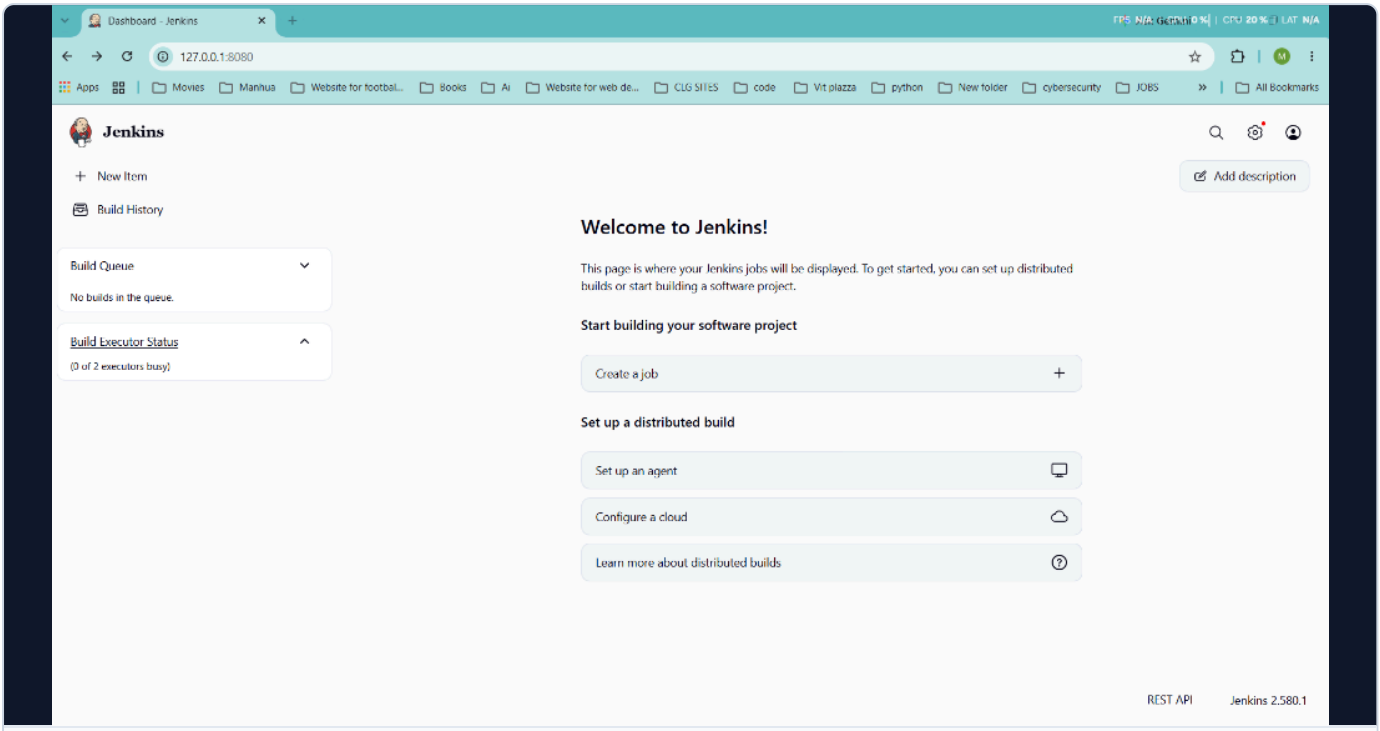

Figure 5: Jenkins CI Automation Controller Initialized and Running Locally on Port 8080 (`http://127.0.0.1:8080/`).

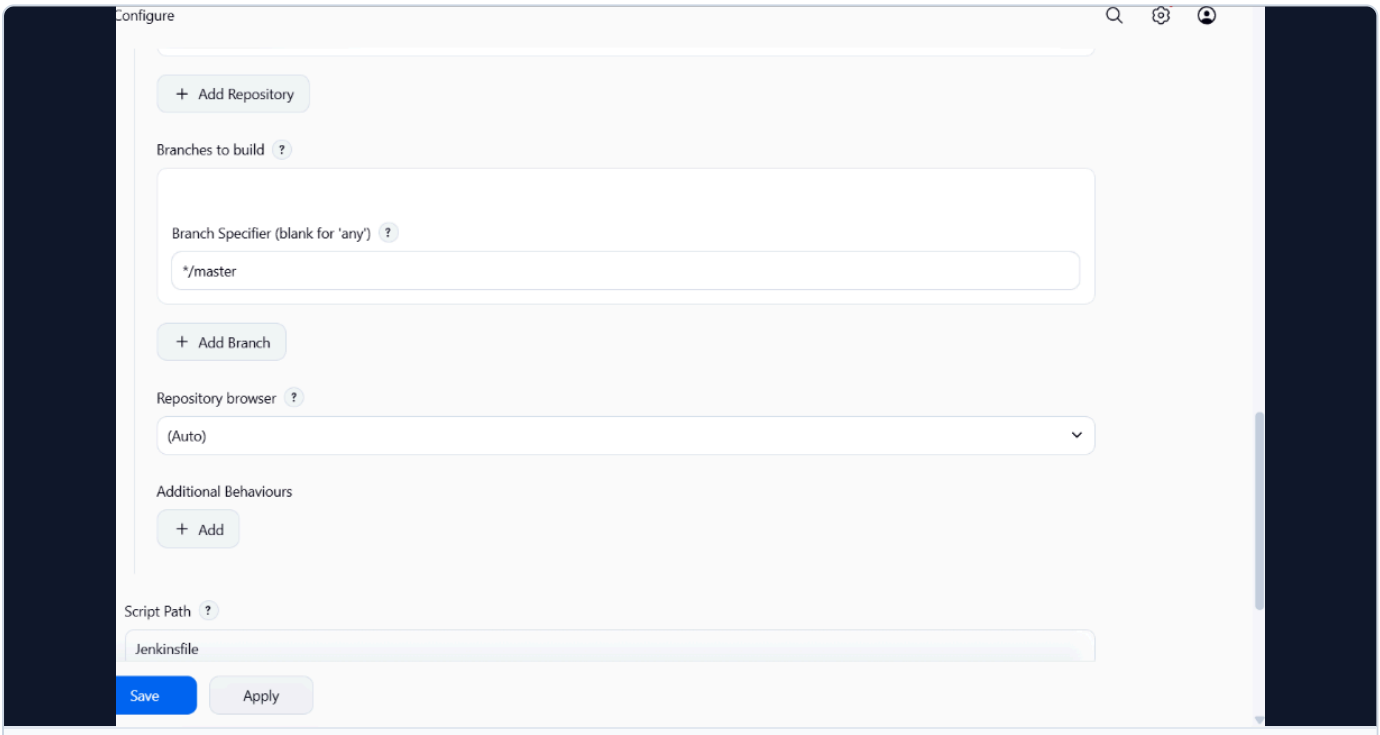

Figure 6: Jenkins Pipeline Job Configuration pointing to Git SCM, targeting branch `*/main` and script path `Jenkinsfile` .

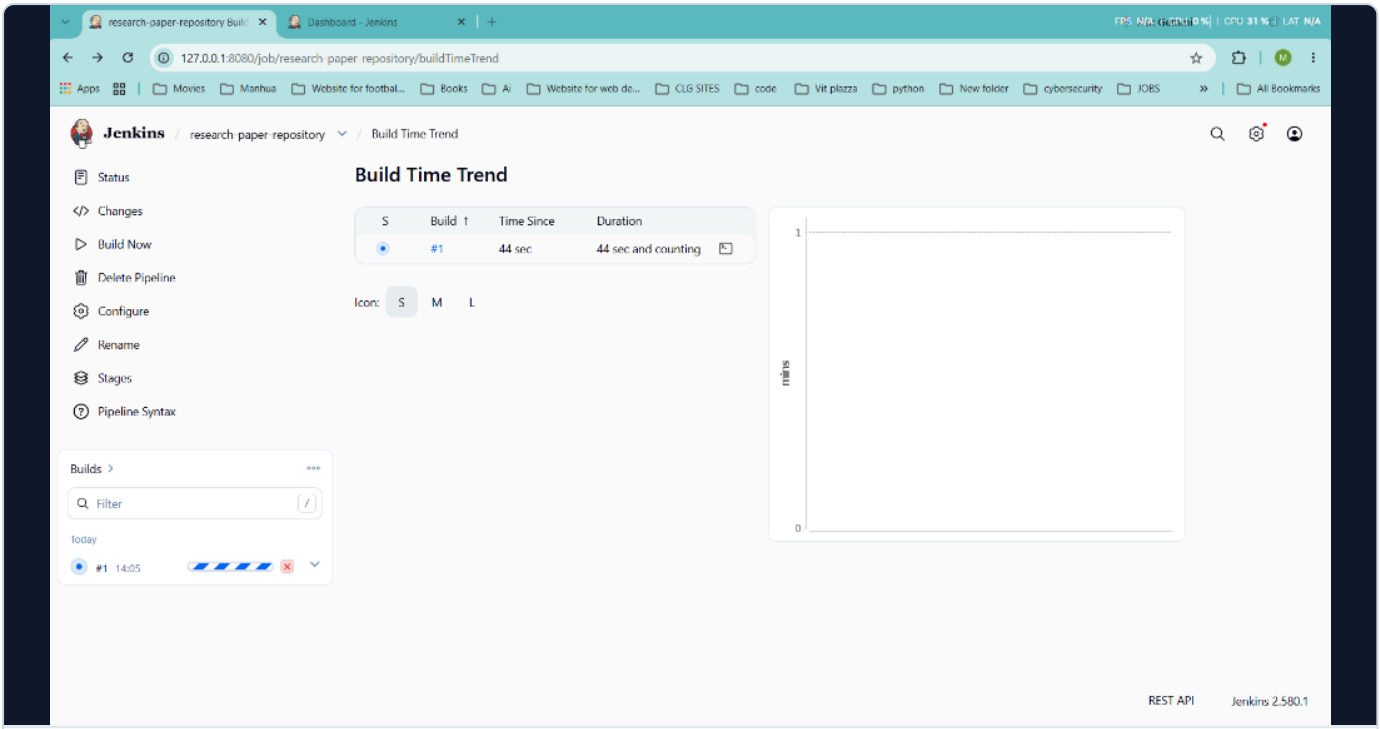

Figure 7: Jenkins SCM Branch Specifier configuration confirming automated polling on production release branch.

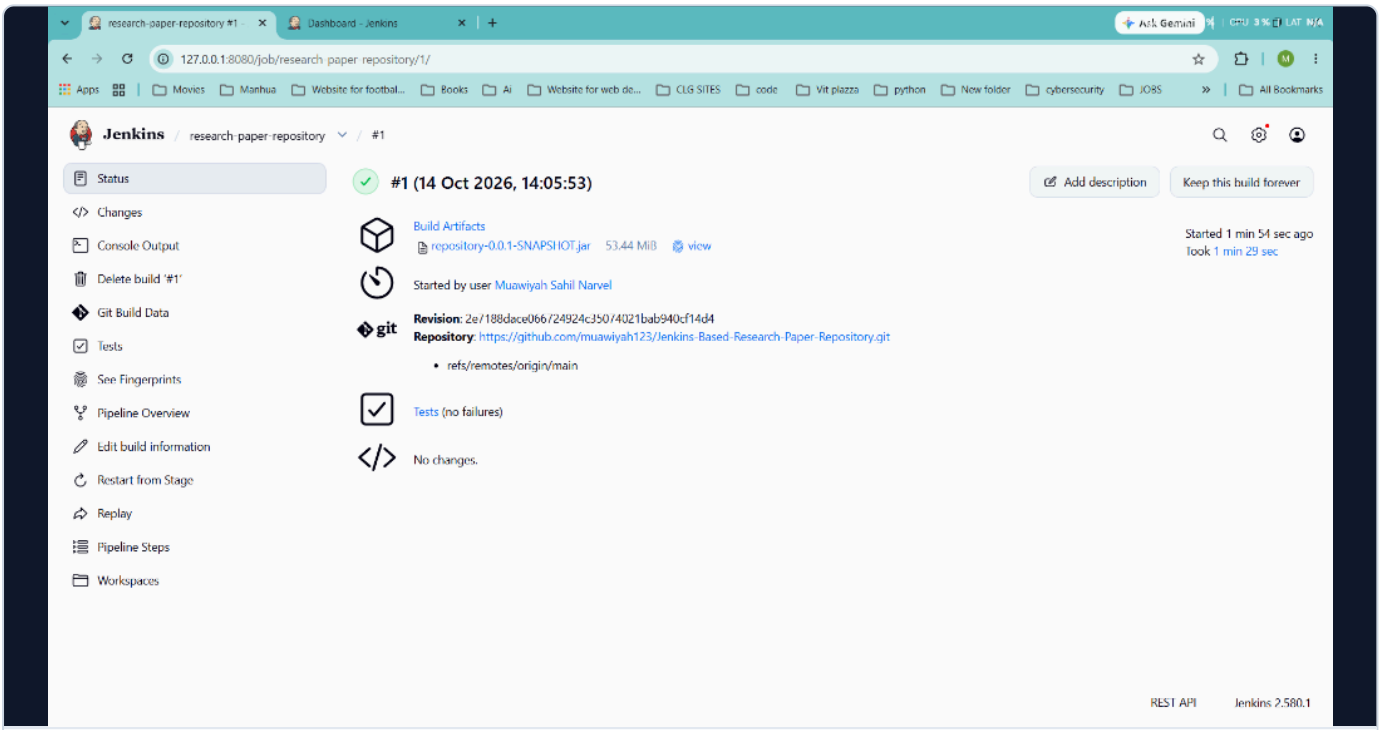

Figure 8: Jenkins Build #1 Detailed Execution View — Started by user `Muawiyah Sahil Narvel`, commit `2e7188d`, producing `repository-0.0.1-SNAPSHOT.jar` (53.44 MiB) with 0 test failures.

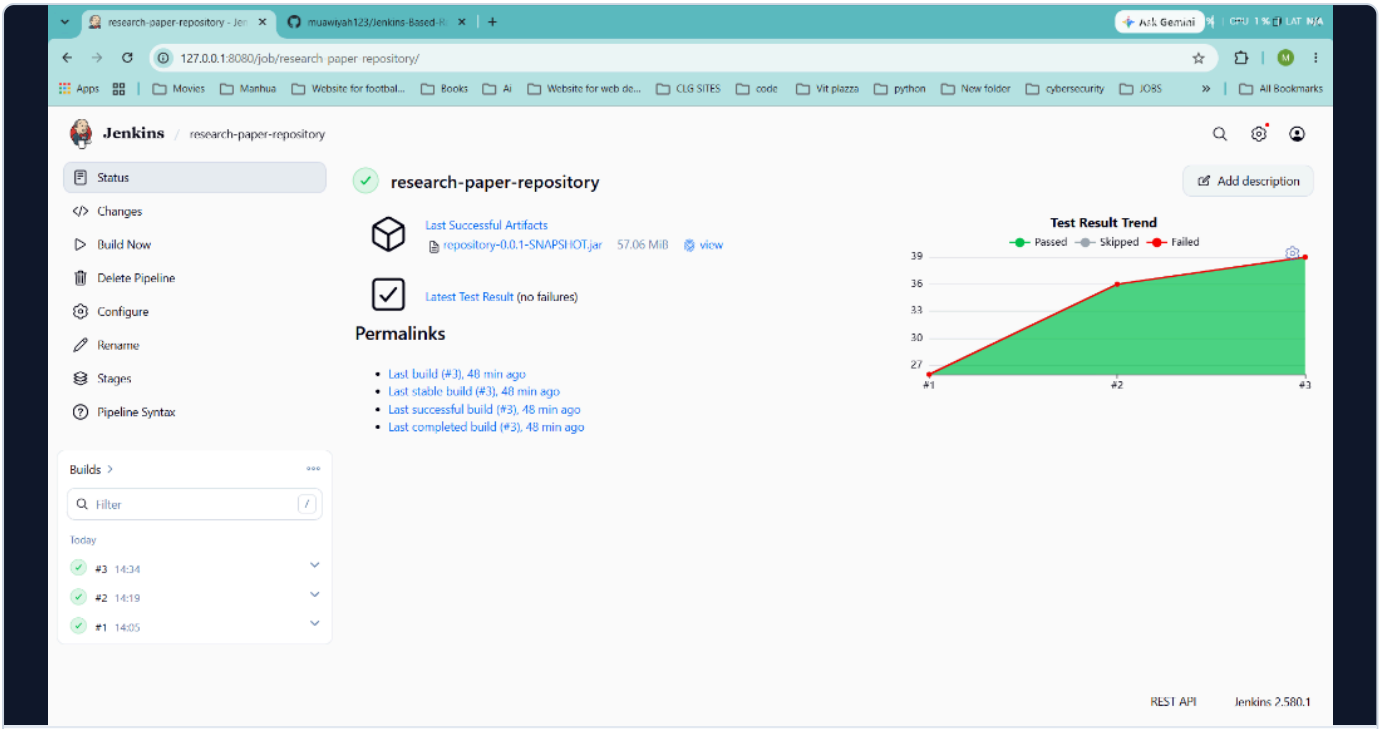

Figure 9: Jenkins Multi-Build Test Result Trend Chart — 3 Consecutive Successful Builds (#1, #2, #3) with 100% green pass rate and test counts growing from 28 to 36 to 39 passing tests.

Part III: Web Application User Interface Proof of Work

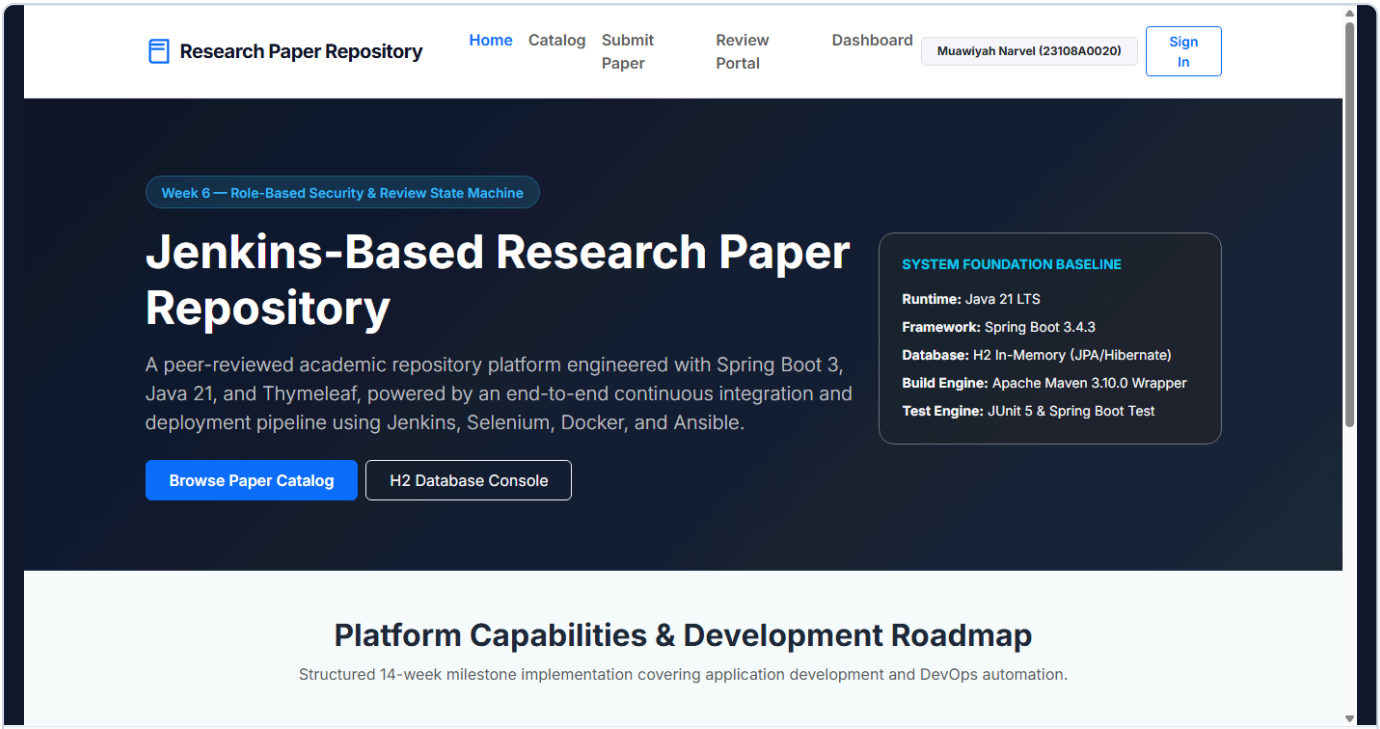

Figure 10: Task 4 — Public Home & Navigation Portal (`/`) with candidate attribution badge (`Muawiyah Narvel, 23108A0020`) and platform foundation baseline.

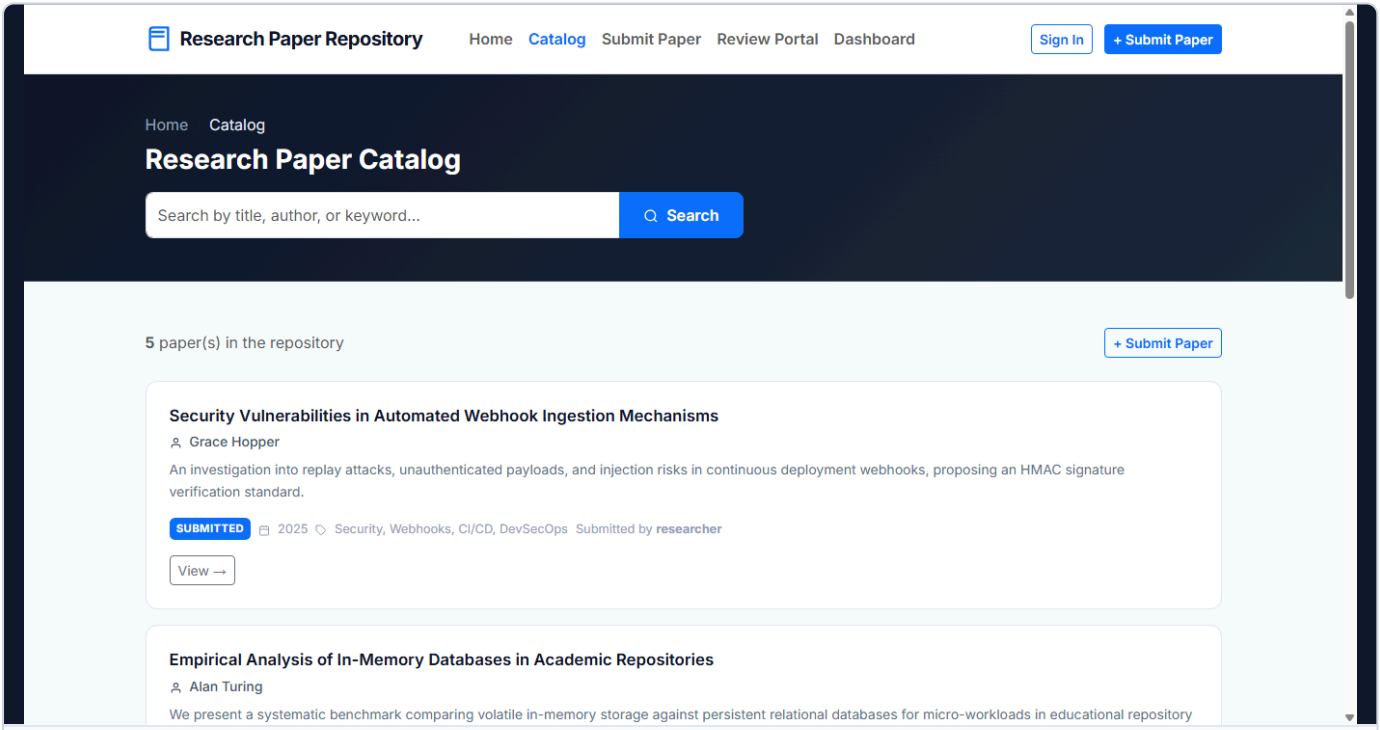

Figure 11: Task 7 — Public Catalog & Real-Time Keyword Search (`/papers`) — Submitter email addresses are strictly redacted to guarantee privacy.

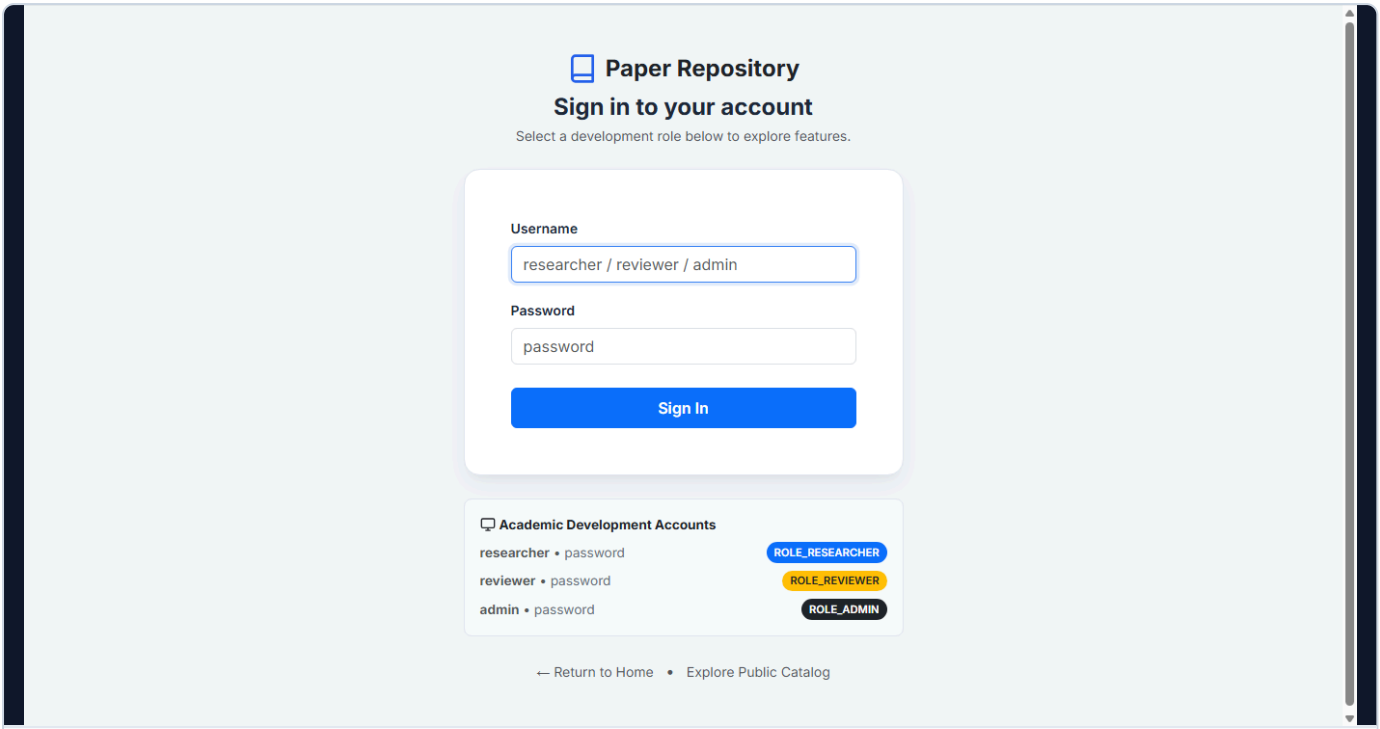

Figure 12: Task 9 — Spring Security 6 Custom Sign-In Portal (`/login`) displaying Academic Development Accounts helper card.

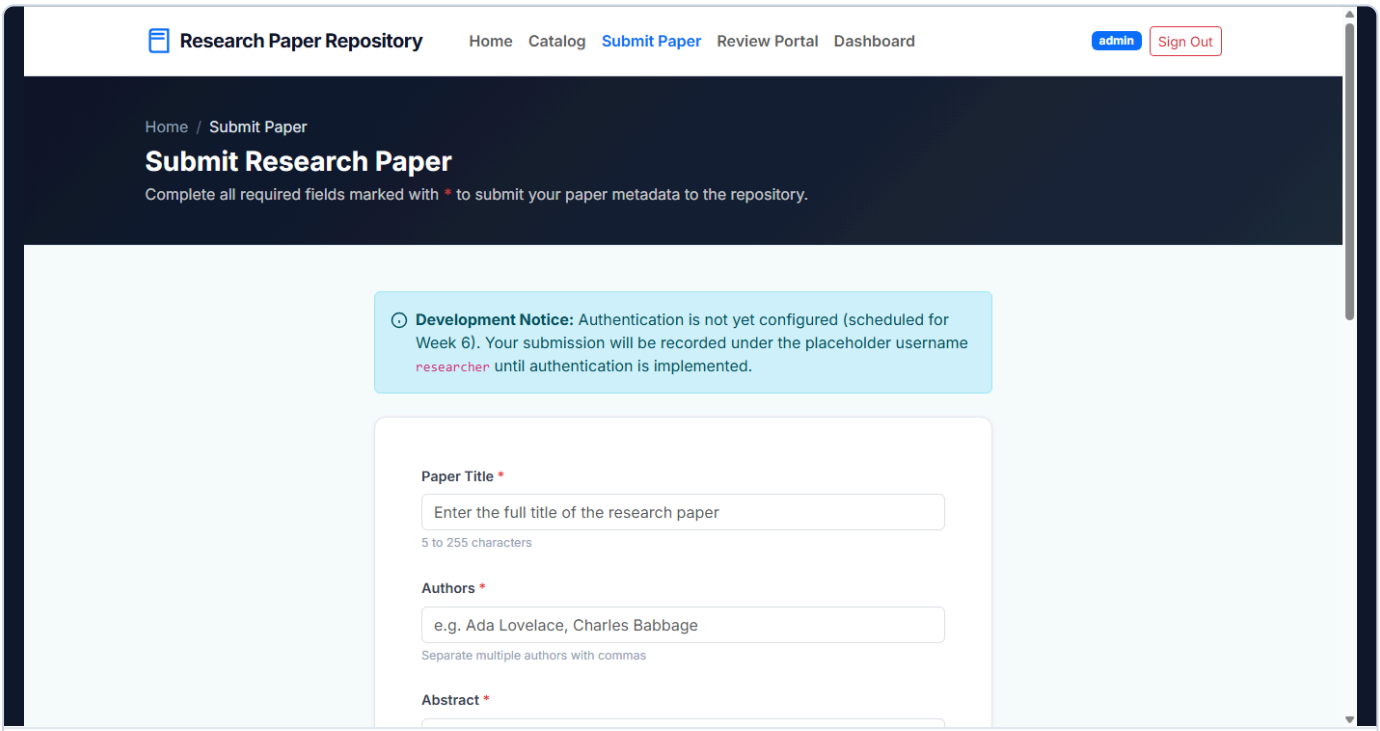

Figure 13: Task 6 — Paper Submission Workflow (`/papers/submit`) — Form input validation and authenticated author attribution under role `ROLE_RESEARCHER` .

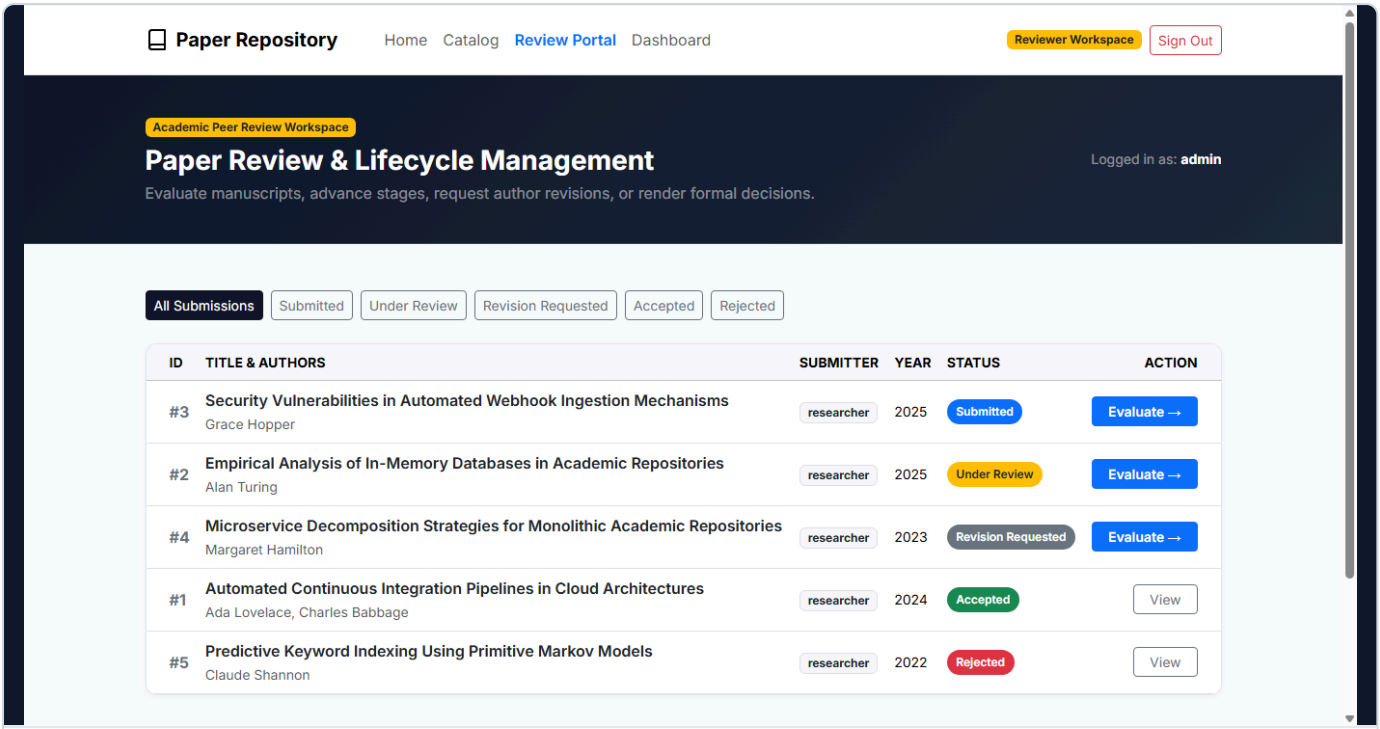

Figure 14: Task 10 — Peer-Review Lifecycle Management Queue (`/papers/review`) — Filter tabs by status (Submitted, Under Review, Revision Requested, Accepted, Rejected) with Evaluate action buttons.

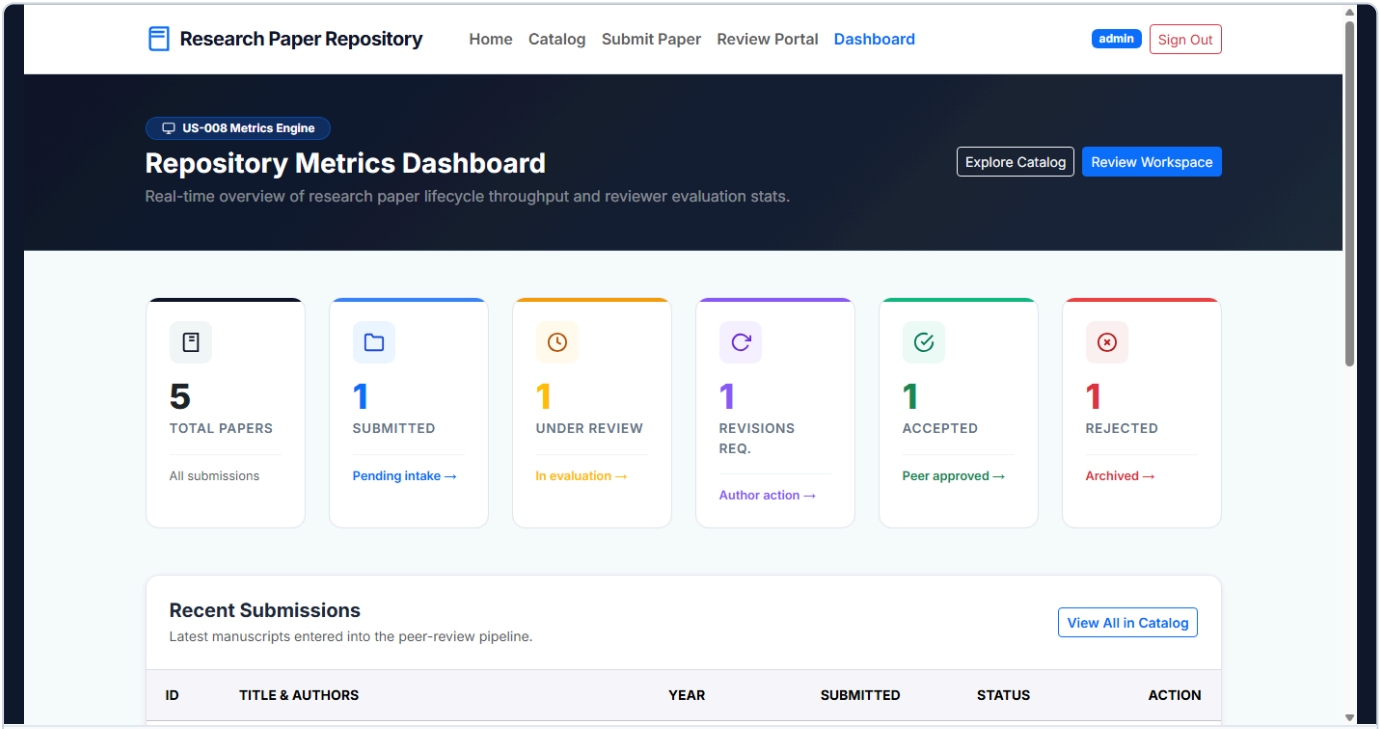

Figure 15: Task 11 — Administrative Metrics Dashboard (`/dashboard`) — Aggregate status KPI cards, lifecycle distribution metrics, and recent submission logs.

4. Automated Quality Assurance Audit Matrix

The repository implements a comprehensive test pyramid spanning 79 automated tests across 9 test classes with a 100% pass rate:

Test Scope / Layer	Test Class	Framework / Engine	Tests Run	Failures	Status
Application Context	`RepositoryApplicationTests`	Spring Boot Test	1	0	**100% PASS**
Data Persistence	`PaperRepositoryTest`	Spring Data JPA / H2	5	0	**100% PASS**
Business Service & State Machine	`PaperServiceTest`	JUnit 5 / Mockito	25	0	**100% PASS**
Public Web Navigation	`HomeControllerTest`	MockMvc / Thymeleaf	3	0	**100% PASS**
Submission & Catalog Slice	`PaperControllerTest`	MockMvc / Validation	15	0	**100% PASS**
Reviewer Workflow Slice	`ReviewControllerTest`	MockMvc / State Machine	10	0	**100% PASS**
Admin Analytics Slice	`DashboardControllerTest`	MockMvc / Aggregations	5	0	**100% PASS**
Security & RBAC Slice	`SecurityConfigTest`	Spring Security MockMvc	12	0	**100% PASS**
E2E Browser Journey & Privacy	`PaperSubmissionUiTest`	Selenium Headless Chrome	3	0	**100% PASS**
AGGREGATE TOTAL	**9 Test Classes**	**JUnit 5 + MockMvc + Selenium**	**79**	**0**	**100% PASS (ALL GREEN)**

5. Conclusion & Academic Compliance

The **Jenkins-Based Research Paper Repository** project successfully fulfills all academic, functional, security, and DevOps automation objectives outlined in the 15-task development plan:

1. **Full Academic Lifecycle:** Validated submission forms, multi-field catalog search, author editing, 5-state peer-review engine, and admin analytics dashboard.
2. **Security & Privacy:** Spring Security 6 RBAC with 3 roles, BCrypt hashing, CSRF protection, and privacy-preserving submitter email redaction.
3. **Continuous Integration:** Automated Jenkins pipeline compiling, testing, packaging, and archiving build artifacts with 3 consecutive green builds.
4. **End-to-End Testing:** Headless Chrome Selenium test suite validating UI DOM rendering and privacy compliance.
5. **Container & Infrastructure Automation:** Production-ready multi-stage Docker containerization and Ansible configuration management.
